

# THE COVID VACCINE & CHILDREN

## A SECOND OPINION

The number of  
**DEATHS & ADVERSE REACTIONS**  
reported after the COVID vaccine is staggering.

VAERS<sup>1</sup>, the US Government database that tracks vaccine reactions, shows a total of **1,088,560 adverse reactions** and **23,149 deaths** following the COVID-19 vaccine (as of 1/28/22)<sup>2</sup>. This is **more reports than from all previous vaccines combined**. This number is likely underreported. An HHS funded study<sup>3</sup> shows that the VAERS system captures only 1-10% of total vaccine reactions.

Multiple well funded studies have demonstrated the negligible risk to healthy children from COVID-19. A large German<sup>4</sup> study showed **zero deaths for children under 5** and a case fatality rate of three out of a million in children without comorbidities. And a Johns Hopkins study<sup>5</sup> of 48,000 children **showed a zero mortality rate** in children under 18 without comorbidities. Another study in *Nature*<sup>6</sup>, shows children under 18 without comorbidities have **virtually no risk of death**.

Healthy children  
face virtually  
**ZERO RISK**  
of death from COVID.

**THE CLINICAL TRIALS**  
for children 2  
to < 5 years old  
**FAILED.**

In an unprecedented move, the FDA's Advisory Committee is considering if a three-dose COVID-19 vaccine series should be authorized when **there are only data available on two doses**<sup>7</sup>. Pfizer's own data demonstrated that **those two doses, did not mount a sufficient antibody response**. Despite this failure, the EUA application is moving forward with a potential third dose added at a later date<sup>8</sup>. This is an unprecedented proposal not backed by science.

A study in *Nature*<sup>9</sup> shows **children's bodies clear the virus more easily** than adults. Another study in *Nature*<sup>10</sup> demonstrates how **children efficiently mount effective immune responses**: "immune systems that naturally generate robust, cross-reactive and sustained immune responses to SARS-Cov-2 ..."

Children's bodies are  
uniquely suited to  
handle COVID-19 with a  
**SURVIVAL RATE**  
**OF 99.995%**

## Vaccinated children face a **SUBSTANTIAL RISK OF MYOCARDITIS**

A study out of Hong Kong<sup>1</sup>, showed **one out of every 2,700 12-17 year old boys being diagnosed with myocarditis** following the 2nd dose of Pfizer's Comirnaty vaccine, or 37 per 100,000 vaccinated. A study from Kaiser<sup>2</sup> **found the same rate of myocarditis** in 12-17 year old American boys, 1/2700. The fact that the same incidence rate was found in in both studies is alarming.

There is **no statistically valid evidence that these vaccines stop transmission, or prevent severe disease or deaths in children**<sup>3</sup>. Which begs the question: what are they actually trying to accomplish by vaccinating small children? What is the goal?

**These vaccines  
DO NOT  
PREVENT  
TRANSMISSION  
OR INFECTION.**

**OVER ONE THIRD  
OF ALL CHILDREN  
are estimated to  
HAVE NATURAL  
IMMUNITY to COVID**

**Over one third of all children are estimated to have natural immunity to COVID, according to CDC's own data**<sup>4</sup>. There is no ethical justification for superfluous vaccination that will put children at elevated risk of vaccine harm.

Are they being objective? A study published in the *New England Journal of Medicine* asserted that two doses of Pfizer/BioNTech vaccine "was found to be safe, immunogenic and efficacious in children 5 to 11 years of age". It includes a disclosure stating that **the study was funded by BioNTech & Pfizer**<sup>5</sup>.

**The studies claiming  
safety and efficacy are  
FUNDED AND  
CONDUCTED  
BY THOSE WHO  
STAND TO PROFIT.**
